Brackets

In the Brackets editor, I use the following extensions: (1) [Emmet](#) (first, because it is the biggest time saver!), (2) Beautify, (3) Brackets Color Picker, (4) Brackets Link File, (5) Brackets Tree Icons, (6) Color Highlighter, (7) ESLint, (8) HTML Hint, and (9) Right Click Extended.

I use the brackets dark theme (set to 16px).

[Xampp](#) for creating a local php server.

[Paint.net](#) is a free, user-friendly graphics editor.

Websites

[Invision Freehand](#) to collaborate on website layouts.

[Fontawesome](#) for icons

[Codepen](#) for communicating code snippets

[Bootstrap](#) documentation for creating Bootstrap enabled web pages

[Unsplash](#), [Freepik](#) and [Pixabay](#) for royalty free images

[UIGradients](#) and [Colors](#) are great for color layouts and gradients.

[Canva](#) for logo's and more
